

Section A: MCQ

- ①. An angle is formed when 2 rays share a common
a) End point b) Line c) Segment d) Direction
- ②. In an angle marked as angle PQR, the vertex is represented by the letter
a) P b) Q c) R d) It can be any letter.
- ③. The two rays that form an angle are called the _____ of the angle.
A) vertices B) line c) Arms d) Segments.
- ④. Which of the following is NOT a valid way to name an angle formed by ray OA & OB?
a) Angle AOB b) angle BOA
c) angle O d) angle OAB.
- ⑤. When opening a pair of scissors, the blades act as the arms & the screw acts as the
a) Ray b) vertex c) line d) point.

Section B : Match the following

- | | |
|-----------------|---|
| ⑥ a) Vertex | i) A portion of a line with one end point |
| b) Arms | ii) The common starting |
| c) Angle | iii) The two rays forming an angle |
| d) Ray | iv) formed by turning one arm away from another |
| e) line segment | v) Has 2- fixed ^{end-} point- |

Section C : Sort Answer & Application

- ⑦ Name 3-Object in your classroom that form an angle.
- ⑧ Draw an angle & ~~label~~ label its vertex as M, and its arm as MN & MO.
- ⑨ write the name of the angle formed by ray ST & SR in 3-different ways.
- ⑩ If a pair of dividers is opened wider, does the length of its arms change?
- ⑪ Does extending the arms of an angle drawn on paper increase the size of the angle? why or why not?
